AI Enhances Students' Academic Development Rather Than Hinders It

The utilization of AI in academic studies bring pros and cons in students' academic development nowadays. There are people who think that AI brings more harms than goods, vice versa. However, based on recent studies, it has been proven that AI actually supports students in academic learning. This finding is based on three main reasons. First, AI becomes grammatical checker for writing in non-native languages. Second, AI enhances learning environment and students' academic results. Lastly, AI gives broader scope of idea, offering students with much more different perspectives.

AI becomes grammatical checker for writing in non-native languages. People certainly have difficulties in proofreading their own writings in non-native language, for example English. It is true that English is universal language, but having to write in second language is still hard. There are people who have this problem. It seems unfair for people who have the capabilities and ideas but are unable to share it because of language barrier. AI helps with this problem.

AI does not help students in writing from scratch, but helps in polishing existing writings. As Nishchay has stated in Katsnelson (2022), not all suggestions are applicable, so people have to go through the suggestions thoroughly. As Katsnelson (2022) has also stated, "The tools won't write papers or applications for you, but they can offer scientists - particularly those for whom English is a second language - a strong grammatical steer" (pp. 208-209). For example, a PhD student from China has an idea of applying big data technology for cancer treatment, radiotherapy. He is planning to publish his paper in an international site but have difficulties in writing in English. He first write the paper without any

language guidance. After that, he use AI to assist him in proofreading his paper. This action alleviates language barrier issue and giving more opportunities for students to go international.

AI enhances learning environment and students' academic results. Students often find it hard to study. This could be caused by the lack of learning environments, the inefficient of teaching and learning activities at school, and other major causes. This leads to the lack of academic accomplishment. However, students can actually use AI to provide the materials relevant for their studies. According to Marzuki et al. (2023), AI was found to support students in terms of learning environment and increasing their overall academic performance (p.28). Students can get more comprehensive learning sources than those which school provided. Often school give students oversimplified version which discourages students' problem solving skills.

AI gives broader scope of idea offering students with different perspectives. Schools often give students one perspective ideas. This often lead students confused. To understand and make use of something, people should take every possible answer into account. People can not draw conclusions based on one-sided arguments. As Habib et al. (2024) has argued, AI provides more comprehensive and diverse answers which help students' elaboration process (p.3). This especially helps in students' creative thinking, including narration writing. Students won't got fixed to one side perspective only but to a more diverse perspective.

Some people think that the utilization of AI will make students become overly reliant on AI. However, this is not a reason to AI hinders academic development of a student. AI is just a tool, what matters the most is

how do people use it. As Minh (2024) has stated, educators should give clear guidelines on using AI (pp. 145-146). They have to make sure students have balanced usage of AI and traditional learning.

Some people also think that the utilization of AI leads to some negative impacts on academic integrity. Uyen (2025) has stated that the advantages of AI underscores its potential risks (p.108). This matter could be solved by the educators. They could listen ^{to} students' concerns and offers a right solution.

In conclusion, AI supports students in learning activities. It is based on three main reasons: AI becomes grammatical checker for writing in non-native language, AI enhances learning environment and students' academic results, and AI gives broader scope of idea offering students with different perspectives. Some cons like students will get overly reliant on AI and AI brings negative impacts on academic integrity can be solved by the educators. They can provide the right solution to prevent those potential risks. Therefore, we should incorporate AI with the right means in academic learning.

Do not repeat words by I word

INTELLECTUAL CONTENT					A-range 35 - 28	B-range 27 - 24	C-range 23 - 20	D-range 19 - 18	F-range 17 - 0
Thinking: Good / Average / Weak (choose one). Keeps focus. Main points clear. Appropriate topic. Understands the topic. No factual errors. Main points covered. Main points support topic. No main points omitted. Abstract concepts clearly explained. Good examples and specific supporting details. Research: Good sources. Convincing evidence. Application clear. Considers multiple positions. Correct interpretation of evidence (summary, synopsis, extrapolation, inference, synthesis).					Exemplary <i>30</i>	Convincing	Acceptable	Needs improvement	Not satisfactory
ORGANIZATION									
Paper level: Precise thesis (main points listed). Strong introduction. Strong conclusion. Logical and convincing progression of ideas. Consistent and appropriate point-of-view. Paragraph level: Accurate topic sentences. Effective transitions connect paragraphs <i>if needed</i>. Paragraph boundaries recognized. Internal paragraph coherence and relevance maintained. Quotation and Citation: Quotations and paraphrases properly introduced. Correct in-text citation (APA format) (Maximum deduction: 4). Correct Reference Page (APA format) (Maximum deduction: 6). Other: Indents (-1 for no indents). Legible handwriting.					Exemplary	Convincing <i>27</i>	Acceptable	Needs improvement	Not satisfactory
LANGUAGE					30 - 24	23 - 20	19 - 17	16 - 15	14 - 0
Basic: Fragment. Run-on. Sentence length. SVO. Word order/location. Missing word/s. Wordy. Verb tense. SV agreement. Verb phrases. Active verbs. Sing/Plural. Spelling. Articles. Prepositions. Pronouns. Conjunctions. Adjectives. Adverbs. Punctuation. Capitalization. Spacing. Cliches. Slang. Profanity. Hyperbole. Meaning unclear. Awkward phrase. Style. Voice. Fronted adverbial conjunctions. Qualifying language. Possessive/Adverbial form vs. prepositional phrases. Repetitious. Vocabulary: Limited vocab. Word form. Word use. Word choice. Poetic vs. precise language.					Exemplary <i>26</i>	Convincing	Acceptable	Needs improvement	Not satisfactory
					Total (100 points max):				<i>83</i>
Instructions followed (-2 for each missed quotation; -2 for each missed paraphrase). Sufficient Length (-2 for 50 words short, -5 for 100 words short). Other (explain).					Points deducted:				
A = 86 A- = 80 B+ = 76 B = 72 B- = 68 C+ = 64 C = 60 C- = 56 D+ = 53 D = 50 F = <50					FINAL SCORE:				<i>83</i>
